

Request to candidates:

Provide a clear statement:

- of your involvement with mobile telephony and particularly the use of the Internet using mobile devices (see <https://dotmobi.mobi/why-mobi> and <https://en.wikipedia.org/wiki/.mobi>);
- why you believe the ALAC should select you as the Liaison.

Wafa Dahmani

My involvement with mobile application started since 2009 with my position at the national committee in charge of the assessment of mobile applications and services referring to consumer rights and fair competition. Later in 2016, I was one of the capacity building programs' leaders for young graduates in mobile applications development sponsored by GIZ. I'm applying for this position because I believe that my expertise in ccTLDs and gTLDs management of the local ccTLD registry and the ICANN accredited registrar and my current involvement in the mobile application industry would be of a humongous added value.

Murray McKercher

I have been involved with mobile telephony since 1990 as an advocate of the mobile internet.

I have been involved with early attempts at integrating the mobile telephony system with the internet since 1990 defining processes and applications among the carrier community through the WAP Forum and the Open Mobile Alliance <http://openmobilealliance.org/>

.mobi was/is an important part of this history and I feel the ALAC should select me as the Liaison to .mobi to provide ongoing context for the oversight of that special internet domain.
