

## **Draft ALAC statement on the proposed 2013 - 2016 strategic plan**

The At-Large Advisory Committee welcomes the new vision of strategic planning, and finds it relevant with the new management approach. It believes that the community should actively participate in the preparation of the new version of the strategic plan through ad hoc joint groups for more efficiency. These groups should be timely formed to conceive the 2014-2020 strategic plan on time.

Nevertheless, the ALAC believes that we cannot stop the ongoing strategic plan preparation and adoption because we are about to start the operating plan and budget elaboration; the FY14 budget priorities are drawn from the adopted 2013-2016 strategic plan objectives and projects.

The insertion of metrics for each focus area is a good approach for better assessment and follow-up. The At-Large Advisory Committee highly appreciates it.

Because the expansion of the domain space (new gTLD and IDN) will give more challenges to ICANN and the operators corporate to maintain stability security and resiliency of the Internet global unique identifier systems, and also because the migration to IPV6 is now a necessity and not a choice for ISPs, business entities and consumers in general, the ALAC considers that training and capacity building will be of most importance for the upcoming years, and thus should be one of the main strategic projects.

The ALAC notices with great satisfaction the implementation by ICANN of a standardized approach for all contracted parties. The ALAC claimed over several consecutive years such standardization for more fairness.

Also, the ALAC welcomes the expansion of the ICANN contractual compliance capabilities by increasing the resources allocated to the compliance function, which will make ICANN well positioned to support the public trust.

Thanks to the At-Large extensive geographic diversity and reach, as well as its large network worldwide, the At-Large Advisory Committee reiterates its disposition to help ICANN in the effort of advocacy, outreach and training on:

- IPv6 adoption for ISPs, business entities and consumers
- global DNS security for TLD operators
- unique identifier SSR in developing countries

The participation of ICANN in Internet governance fora, including those organized by the United Nations and other intergovernmental agencies is absolutely necessary to show that it is an exemplary model for multi-stakeholder bottom-up global governance. Therefore, ALAC believes that this participation should reflect the multi-stakeholder bottom-up model through substantive contributions made by the various ICANN community constituencies in those fora. Such kind of contribution is much more beneficial for ICANN than the nice communication speeches and shows.

In conclusion, ALAC believes that the community input regarding the strategic priorities should be effectively taken into consideration for the final plan establishment and adoption.
